- Optional Barrel Exchange Key
- Optional Master Key

**The \*Cyber Lock CL5 is intended for customers seeking an enhanced level of security.**

Its internal wave presents cutting edge design combined with state of the art key production.

The wave cuts are embedded into 3mm thick surface material with the addition of dimples bored into the two lateral side walls. The main feature is that keys cannot be reproduced by simply providing a locksmith with a key code.

Keys can only be duplicated by limited locksmiths with specialised machinery. The system's level of security ensures a higher resistance to unauthorised entry through lock manipulation.

Davell also offer an interchangeable barrel

system for this series so all aspects of future needs are covered.
