Options

- Slam Latch
- Alternative Colour - White (Additional lead time)
- Available with **Remote Allocation System (RAS)**

The [Remote Allocation System \(RAS\)](#) works with our range of digital combination locks and enables you to remotely manage all of the locks in your storage area without the need to go to site. Remote management is via a simple web based system which can be accessed from any location with the usual range of desk based and hand held devices. If you are managing multiple installations, all of these are controlled from this one convenient website.

Once online, you are able to see at a glance which locks are currently available and allocate these to new users. The rental period can be for an individual user or a group of users and can even be set to unlock automatically. All of this at a push of a button.

This system is ideal for applications such as music festivals, hot desking, locker rental and personal storage as the system manager has the ability to assign a new code to a single lock or all of the locks at once from any location. This eliminates the need for users to carry keys and reduces running costs by removing the need for service calls to change lock codes locally. Installation is simple with no hard wiring or additional power or infrastructure required to run and manage the system.
